

2020-2021 Flu Insurance Information Form

The completion of this form is necessary for every vaccine recipient. **If no insurance information is available, please fill out as much as possible using existing information.** Information about the person to receive vaccine: **(PLEASE PRINT!)** *REQUIRED FIELDS

Name: (Last, First, MI)*		Date of birth: * ____ _ Month Day Year.		Age*	Sex: (Circle)* Male Female Other
Street Address:*			Email:		
City:*	State: *	Zip:*	Phone:*		

Insurance Information: Include the ENTIRE member ID number and any letters that are part of that number

Name of Insurance CO:*	Member ID #:*	Group ID #: (if available)
Medicare Number:	Is Medicare Primary? Yes No	Is Subscriber Retired? Yes No

***Place Photo Copy of All Insurance Cards Here:**

If person getting vaccinated is NOT the subscriber, please complete the following:

Subscriber's Name: (Last, First, MI)*		Subscriber's Date of Birth: * ____ _ Month Day Year		Sex: (Circle)* Male Female
Subscriber's Street Address: * (If different from address above) <input type="checkbox"/> SAME AS ABOVE				
City:*	State*	Zip: *	Phone:*	
Patient Relationship to Subscriber: (Circle)* Spouse Child Other				

I give permission to be vaccinated and for my insurance company to be billed.

X _____ Date _____
(Signature of patient, parent or legal guardian)

For Clinic/Office Use Only:

Date of Service	Vax Type	Vaccine Mfgr	Lot No	Exp Date	Dose (mL)	State Supplied		Injection Route	Injection Site	Date On VIS	Date VIS Given
	IIV4 (Fluzone)	Sanofi Pasteur			0.5	No		IM	R Arm L Arm	Aug 2019	Same as service
	IIV4-HD (Fluzone High Dose)	Sanofi Pasteur			0.7	No		IM	R Arm L Arm	Aug 2019	Same as service
	RIV4 (Flublok)	Sanofi Pasteur			0.5	No		IM	R Arm L Arm	Aug 2019	Same as service

Signature of Vaccine Administrator: _____

Screening Checklist for Contraindications for Inactivated Injectable Influenza Vaccination

Patient Name: _____ Patient Date of Birth / /
please print

For patients (both children and adults) to be vaccinated:

The following questions will help us determine if there is any reason we should not give you or your child inactivated injectable influenza vaccine today. If you answer "yes" to any question, it does not necessarily mean you (or your child) should not be vaccinated. It just means additional questions must be asked. If a question is not clear, please ask your healthcare provider to explain it.

	yes	no	don't know
1. Is the person to be vaccinated sick today?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2. Does the person to be vaccinated have an allergy to a component of the vaccine?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3. Has the person to be vaccinated ever had a serious reaction to influenza vaccine in the past?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4. Has the person to be vaccinated ever had Guillain-Barré syndrome?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

If the answer to any of the above questions is yes, please consult your health care provider before arriving at the clinic.

VACCINE INFORMATION STATEMENT

Influenza (Flu) Vaccine (Inactivated or Recombinant): *What you need to know*

Many Vaccine Information Statements are available in Spanish and other languages. See www.immunize.org/vis

Hojas de información sobre vacunas están disponibles en español y en muchos otros idiomas. Visite www.immunize.org/vis

1 Why get vaccinated?

Influenza vaccine can prevent **influenza (flu)**.

Flu is a contagious disease that spreads around the United States every year, usually between October and May. Anyone can get the flu, but it is more dangerous for some people. Infants and young children, people 65 years of age and older, pregnant women, and people with certain health conditions or a weakened immune system are at greatest risk of flu complications.

Pneumonia, bronchitis, sinus infections and ear infections are examples of flu-related complications. If you have a medical condition, such as heart disease, cancer or diabetes, flu can make it worse.

Flu can cause fever and chills, sore throat, muscle aches, fatigue, cough, headache, and runny or stuffy nose. Some people may have vomiting and diarrhea, though this is more common in children than adults.

Each year **thousands of people in the United States die from flu**, and many more are hospitalized. Flu vaccine prevents millions of illnesses and flu-related visits to the doctor each year.

2 Influenza vaccine

CDC recommends everyone 6 months of age and older get vaccinated every flu season. **Children 6 months through 8 years of age** may need 2 doses during a single flu season. **Everyone else** needs only 1 dose each flu season.

It takes about 2 weeks for protection to develop after vaccination.

There are many flu viruses, and they are always changing. Each year a new flu vaccine is made to protect against three or four viruses that are likely to cause disease in the upcoming flu season. Even when the vaccine doesn't exactly match these viruses, it may still provide some protection.

Influenza vaccine **does not cause flu**.

Influenza vaccine may be given at the same time as other vaccines.

3 Talk with your health care provider

Tell your vaccine provider if the person getting the vaccine:

- Has had an **allergic reaction after a previous dose of influenza vaccine**, or has any **severe, life-threatening allergies**.
- Has ever had **Guillain-Barré Syndrome** (also called GBS).

In some cases, your health care provider may decide to postpone influenza vaccination to a future visit.

People with minor illnesses, such as a cold, may be vaccinated. People who are moderately or severely ill should usually wait until they recover before getting influenza vaccine.

Your health care provider can give you more information.

U.S. Department of
Health and Human Services
Centers for Disease
Control and Prevention

4 Risks of a vaccine reaction

- Soreness, redness, and swelling where shot is given, fever, muscle aches, and headache can happen after influenza vaccine.
- There may be a very small increased risk of Guillain-Barré Syndrome (GBS) after inactivated influenza vaccine (the flu shot).

Young children who get the flu shot along with pneumococcal vaccine (PCV13), and/or DTaP vaccine at the same time might be slightly more likely to have a seizure caused by fever. Tell your health care provider if a child who is getting flu vaccine has ever had a seizure.

People sometimes faint after medical procedures, including vaccination. Tell your provider if you feel dizzy or have vision changes or ringing in the ears.

As with any medicine, there is a very remote chance of a vaccine causing a severe allergic reaction, other serious injury, or death.

5 What if there is a serious problem?

An allergic reaction could occur after the vaccinated person leaves the clinic. If you see signs of a severe allergic reaction (hives, swelling of the face and throat, difficulty breathing, a fast heartbeat, dizziness, or weakness), call **9-1-1** and get the person to the nearest hospital.

For other signs that concern you, call your health care provider.

Adverse reactions should be reported to the Vaccine Adverse Event Reporting System (VAERS). Your health care provider will usually file this report, or you can do it yourself. Visit the VAERS website at www.vaers.hhs.gov or call **1-800-822-7967**. *VAERS is only for reporting reactions, and VAERS staff do not give medical advice.*

6 The National Vaccine Injury Compensation Program

The National Vaccine Injury Compensation Program (VICP) is a federal program that was created to compensate people who may have been injured by certain vaccines. Visit the VICP website at www.hrsa.gov/vaccinecompensation or call **1-800-338-2382** to learn about the program and about filing a claim. There is a time limit to file a claim for compensation.

7 How can I learn more?

- Ask your healthcare provider.
- Call your local or state health department.
- Contact the Centers for Disease Control and Prevention (CDC):
 - Call **1-800-232-4636 (1-800-CDC-INFO)** or
 - Visit CDC's www.cdc.gov/flu
